UKE Aims for Simultaneous Allocation of All Frequency Bands

During the TIME Congress in Warsaw, the President of the Office of Electronic Communications (UKE), Jacek Oko, announced plans to synchronize the allocation of all frequency bands. UKE intends to align the duration of reservation decisions so that all bands are allocated simultaneously, facilitating future registration planning.

Jacek Oko indicated that after 2030, the so-called third digital dividend will release the 600 MHz band for mobile networks. In the context of the upcoming technological revolution associated with 6G networks, Poland has good adaptation opportunities thanks to large research and development (R&D) centers of major network infrastructure manufacturers, such as Nokia in Wrocław and Ericsson in Łódź and Kraków.

Jacek Oko emphasized that by 2030, the standalone standard will be the norm for 5G networks, and 6G networks will already be fully implemented. Legal changes are also anticipated to enable the release of the 600 MHz band for mobile networks

Company Associated with Play and UPC Polska Expands Coverage

In February, Polski Światłowód Otwarty (PŚO) expanded the reach of its fiber-optic network by over 27,000 households.

Currently, PŚO's network covers more than 4.1 million households, of which nearly 900,000 are connected to the fiber-optic network. As a wholesale operator, PŚO offers all retail operators open access to the broadband network on non-discriminatory terms. The company has signed agreements with six major retail operators: Netia (Polsat Plus Group), Orange, Play, Plus (Polsat Plus Group), T-Mobile and RFC.

Ultimately, PŚO plans to cover over 6 million households in Poland with its FTTH network, implementing the expansion and modernization of the network using XGS-PON technology, which enables speeds of up to 8 Gbit/s.
